

From Chung Kyu Kim

I want to create a video work about thinking and dreaming.

That is to say, When I see a person on the street, I often have a question about What he or she is thinking about. It must be fun to change invisible object like dream to visible images.

I know this idea is too wide and big, so I need your help to focus on this idea. Mainly, my idea consists of two parts. The first part is shouting various peoples on the street. The second part is editing their thinking used by cuts from other sources like movies, dramas, colors, or video effects.

For example, A camera move around a street or somewhere. The camera find a person and then zoom in his head. The next step is dissolving white or black on the screen. Now the screen shows his thinking made by my imagination. They may think about love, murder, party, colors, freedom, friends, study, and so on. This is a try to combine existing objects and my imagination. I will input my imagination to other peoples in this work.
